

AgroVit® DiaStop

MOSEGÅRDEN A/S

## AgroVit® DiaStop

### An efficient remedy for digestive disorders

#### Digestive disorders among calves is a continuously perennial problem

In cooperation with many cattle farmers an intensive effort has been made to find both a fast-acting solution against digestive disorders but also a solution where the electrolyte, energy- and fluid balance of the calves are sustained

The solution is **AgroVit® DiaStop**

**AgroVit® DiaStop** consists of natural products which is composed so that the calf quickly can get help to help itself i.a. energy, electrolytes, probiotics, vegetable fibres, dry yeast, thickener, minerals and vitamins

**AgroVit® DiaStop** can be used separately or together with medicine and in every situation where you have problems with the digestion of the sucking calf

Digestive disorders can not be totally avoided not even with a tighter management, however, an early action is invaluable

By preventing digestive disorders, the gain of the calf is maintained and the disease resistance is improved significantly

## Allocation:

**AgroVit® DiaStop** can be used as a preventive treatment in milk with 25 gram per litre or can be used alone with 30 – 50 gram per litre in 40-45 °C water for calves with digestive disorders. When the digestive disorders is improving you may gradually return to milk feeding by adding 25 gram of **AgroVit® DiaStop** per litre milk

### AgroVit® DiaStop

- An effective solution to stop digestive disorders
- Easy to use, can be allocated in the milk
- Probiotics and vegetable fibres are added
- High content of Vitamin C and Vitamin E
- High content of electrolytes and glucose
- Very tasty

## To get the best result

Start the treatment at the very first suspicion of digestive disorders. If it is a definite epidemic, start with the allocation in the milk approximately 24 hours before the diarrhoea occurs, from your experience. Make a new mixture of **AgroVit® DiaStop** for every treatment. Make sure to clean trough and feeding equipment before feeding and wash trough carefully afterwards to reduce the risk of reinfections

## Packaging:

4 kg plastic can with a measuring jug

## Storage:

Store in a cool, dark and dry place in sealed packaging
